

EMILIE MURAT

FRENCH RAILS FULLSTACK DEVELOPER

4+ years | Building SaaS platforms from scratch

EDUCATION

- 2025** Academic PTE - Score 67 (eq. IELTS 7.5 / CEFR C1) **#Pearson**
2019 Certificates in Ruby, R.O.R. and Javascript **#Open Classroom**
2019 Bootcamp Full-Stack Developer **#Le Wagon Marseille**
2016 B.T.S Multimedia Infographist **#AFIP Villeurbanne**

KEY EXPERIENCES

Lead Full-Stack Developer - Drime | Feb 2021 - Apr 2024

Ruby on Rails, JavaScript (Vanilla, ES6, JQuery), PostgreSQL, AWS, Azure API's, GitLab, Docker, Figma

- Built a multilingual video player & editor SaaS from scratch (front end & back end)
- Designed a custom .drime JSON format for multilingual playback from a single file
- Rebuilt video pipeline with background jobs to handle 10x more projects without crashes
- Created Smart Indicators dashboard, iframe & QR code generators
- Integrated Azure TTS & Translator APIs for voiceovers and auto-translations
- Led full UI/UX redesign: player, homepage, registration flow, admin dashboards
- Automated reading/writing of .drime files on AWS for scalable storage
- Migrated the whole platform to Docker, AWS, GitLab with an external architect.

Lead Full-Stack Developer - Pickaden | Mar 2020 - Feb 2021

Ruby on Rails, JavaScript, PostgreSQL, Heroku, GitHub, AWS, Sendinblue, Figma

- Developed all new features for a real-time childcare booking SaaS
- Stabilized and debugged the initial MVP
- Completely redesigned the core search bar UX/UI with filters and instant search
- Built the entire parent area and request submission workflow
- Created the management area for institutions
- Enhanced the admin interface and added email notifications
- Wrote Capybara system tests and SQL KPI queries
- Improved performance (loading time, responsiveness, images)

Ruby on Rails Developer - Cinema's Hackathon | Dec 2019

HTML/CSS, Ruby, Rails, Git, GitHub, PostgreSQL

Ruby on Rails Mentoring - «Rails girls» Saint-Etienne | Nov 2019

Ruby, Rails, SQL, Git, PostgreSQL

Teacher Assistant - Le Wagon Marseille | Nov 2019

HTML5, CSS3, Bootstrap, Git

- Supported students during an intensive fullstack bootcamp
- Taught HTML, CSS, Bootstrap, UX/UI fundamentals
- Helped debug and review students' code daily
- Improved students' understanding of component-based front end development

Vue.js Developer - Marseille's Hackathon | Oct 2019

Vue.js, HTML/CSS, Git, Illustrator

«Lead Fullstack Developer with 4+ years of experience, building SaaS platforms from scratch. Strong focus on product design & UX/UI. Looking for opportunities in small, agile teams, ideally focused on React and scalable products.»

CORE SKILLS

BACKEND: Ruby on Rails, SQL,

PostgreSQL, PHP

FRONTEND: Javascript (ES6, Vanilla,

React.js), HTML5, CSS/SCSS, Bootstrap

PRODUCT & DESIGN: Figma, UX/UI

design, Lottie animations, Illustrator

CLOUD & DEVOPS: AWS (S3), Heroku,

Docker, GitHub/GitLab CI

APIS: Azure (TTS, Translate), AWS

OTHER TOOLS: Git, NPM, JSON,

Webpack

SOFT SKILLS: Autonomy, product-

-oriented, cross functional collaboration

LANGUAGES

FRENCH: Native language

ENGLISH: Advanced (CEFR C1 level)

SPANISH & GERMAN: Basic

INTERESTS

Lead Fullstack Developer | Drime

Full remote - Feb 2021 to Apr 2024
Permanent contract

Product overview

DRIME is a responsive, multilingual, interactive, embeddable video player with no cookies, plus an integrated video editor. It relies on a custom .drime JSON-based format that enables playback in multiple languages (subtitles, voiceovers, dynamic designs) from a single video file. This reduces production time, storage costs, and the ecological footprint associated with file storage (one hosted video per project, one DRIME file per project).

1/ DRIME Player & .drime file format

For professionals/clients

- Video tutorials are filmed by the DRIME team and optimized for all screen resolutions.
- Features include multi-language broadcasting via voiceovers, subtitles, and dynamic designs in all selected languages, plus voice commands. Tutorials/manuals can be broken into step-by-step sequences.
- Beyond the DRIME platform's video library, clients can embed single videos or entire libraries on their own sites via iframes (indexed by Google).
- The platform includes a dashboard with "Smart Indicators", user-rights management, custom iframes, and QR codes. Dynamic video designs were also road-mapped.

For end users

- A video playback experience that adapts to screen resolution, with step-by-step or continuous playback, voice commands, sound/subtitle settings, and language selection.
- By default, the video displays in the user's browser language when available, otherwise in English.

Key Achievements – Player

- Developed new features end to end (front end & back end).
- Player redesign: persistent sound/subtitle settings; CSS & Lottie animations for buttons; step counters for step-by-step videos; improved voice commands.
- Homepage redesign with Lottie animations and menu creation,
- Fixed video creation crashes (>5 videos) by implementing a background job for multilingual generation; later redesigned the pipeline for scalability.
- Created a new library type, redesigned the previous library, and refactored the data model to support custom client designs at scale.
- Built Smart Indicators (library dashboard, rankings, graphs, averages, percentages).
- Fully redesigned user-rights & favorites with a mini search engine (search by email).
- Built a custom iframe generator (logo, banner, menu, filters, forced language, Smart Indicator code copy).
- Built a QR code generator (color, background color, size, format, Smart Indicator, download).
- Redesigned error pages and created static pages (pricing, legal notices, privacy policy).
- Redesigned registration and login pages.
- Implemented multilingual dynamic video designs.
- Built a Super Admin dashboard to create/modify design types, including creating/reading/editing JSON animation files directly.
- Created a second landing page.

Figma, Ruby on Rails, Vanilla JS, ES6, jQuery, JSON, HTML, CSS, SCSS, PostgreSQL, SQL, Heroku, AWS, Git

2/ DRIME Video Editor

What it is

A standalone editor (distinct from the player) to create slideshows from short videos/photos with customizable transitions. Like the player, it's multilingual, responsive, interactive, embeddable, and lightweight.

Speed of production

With pre-selected media and text, clients can create & publish a video in ~5 minutes. Adding another language (voiceover, subtitles, etc.) takes ~2 minutes. Logos and soundtracks can be added. In short, with minimal prep, a multilingual video can be produced in ~10 minutes and published immediately. Export via iframe, a single embed code line, or as a showcase on the DRIME platform

Key Achievements – Editor

- Set up the project on Heroku and installed it on GitHub.
- Created a third landing page with animations (scroll-unfolding video timeline, parallax, and other effects).
- Built the DRIME video editor from scratch (front end & back end).
- Implemented the app’s standard static pages.
- Created a Super Admin area to manage clients and their projects.
- Built a client area where clients can list, create, modify, duplicate, publish, and delete projects.
- Automated reading/writing of the required DRIME files on AWS for storage.
- Enabled user project creation, DRIME file creation, and video status management (temporary, draft, published).
- Added project options (editing choices, designs, responsive-mode focus).
- Enabled real-time previews of all effects upon selection.
- Integrated Azure Text-to-Speech (voiceovers) with gender/region filters; users can sample each selected voice on a personalized DRIME sample translated into all languages; supported custom pronunciations and deletion/editing.
- Integrated Azure Translator for project translations, with manual client overrides.
- Enabled project preview before publishing and draft saving.
- Migrated the project to GitLab, Docker, and AWS, in collaboration with an independent architect who built the new environment.

Figma, Ruby on Rails, Vanilla JS, ES6, jQuery, JSON, HTML, CSS, SCSS, PostgreSQL, SQL, Heroku, AWS, Azure APIs, Git, GitHub, GitLab, Docker.

Result: Delivered a production-grade platform that lets users build and publish multilingual videos in minutes from a single source file, while improving stability and scalability (pipeline rebuilt with background jobs; model refactors; new dashboards & generators).

Lead Junior Developer | Pickaden

Full remote - Mar 2020 to Feb 2021
Freelance

Product overview

Pickaden is a Paris-based startup offering a SaaS platform for real-time management and booking of childcare services.

For professionals

- Manage and optimize duty schedules
- Receive, accept or decline care requests from parents based on real-time availability
- Publish and maintain an online profile

For parents

- Search engine to find available childcare institutions near a given address
- Submit online care requests
- Create and manage a personal dashboard and profile

Key Achievements

- Developed all new features end-to-end (front end & back end).
- Debugged and stabilized the initial MVP.
- Significantly improved responsiveness across much of the site.
- Redesigned the core search bar for better UX/UI: added filters, improved design, and enabled automatic search on filter validation.
- Installed several JavaScript plugins: logo carousel on the homepage, and keyword search on the help page (including creating the page from scratch).
- Built the entire parent area, including request submission workflows.
- Set up the management area for institutions.
- Implemented email sending functionality.
- Enhanced the admin interface with multiple new features.
- Wrote Capybara system tests.
- Optimized loading times, especially for images.
- Prepared the technical migration from Woonies to Pickaden.
- Wrote SQL queries on the KPI analytics platform.

Photoshop, Illustrator, Figma, Ruby on Rails, JavaScript, HTML/CSS, PostgreSQL, SQL, Heroku, Git, GitHub, AWS, Sendinblue, WordPress.

Result: Delivered a functional, stable and user-friendly SaaS MVP, improving performance and UX while implementing all core features from scratch.

React.js Application | React-Flats

Personal project - exercice (Jan 2020)

kwette.github.io/react-flats/

A small application built with React.js.

Displays a list of apartments with a Google Map. When a user clicks on an apartment, a red marker appears on the map.

React.js, HTML/CSS, Git, GitHub.

<https://github.com/Kwette/react-flats>

https://www.behance.net/gallery/90610133/Affiche-appartements-sur-Go-ogleMap_-Appli-Reactjs

React.js Application | Giphy-api_lil' app

Personal project - exercice (Jan 2020)

<https://github.com/Kwette/react-gifs>

A small application built with React.js.

GIF generator using the Giphy API. The user types a query in the search field, and the corresponding Giphy GIFs appear in the list on the right. When the user clicks on a GIF, it appears on the left side below the search field.

React.js, HTML/CSS, Git, GitHub.

<https://github.com/Kwette/react-gifs>

[https://www.behance.net/gallery/90443427/Giphy-api_lil-app-Gnrateur-de-gifs-\(Reactjs-app\)](https://www.behance.net/gallery/90443427/Giphy-api_lil-app-Gnrateur-de-gifs-(Reactjs-app))

Ruby On Rails Application | Buy & Co I

Personal project - exercice (Dec 2019)

<https://github.com/Kwette/petites-annonces-rails>

A Rails application for publishing classified ads.

As a user, I can:

- Sign up or log in,
- Go to the homepage,
- View the list of published advertisements,
- Access an advertisement's page with all its details.

As an admin, I can:

- Sign up or log in,
- Go to the homepage,
- View the list of advertisements (published and unpublished),
- Publish an advertisement to make it visible to all users,
- Access an advertisement's page with all its details.

Figma, Ruby on Rails, JavaScript, HTML/CSS, PostgreSQL, SQL, Heroku, Git, GitHub.

<https://github.com/Kwette/petites-annonces-rails>

[https://www.behance.net/gallery/90445649/Buy-Co_-Publication-dannonces-\(Application-Rails\)](https://www.behance.net/gallery/90445649/Buy-Co_-Publication-dannonces-(Application-Rails))

Developer Fullstack Rails/JS | Cinema des Arcs Hackathon

Les Arcs Cinema Festival (Dec 2019)

<https://lesarcs-filmfest.com/fr>

Development of the Rails application "Cine-Talks" in progress – a platform connecting "speakers" with cinemas and distributors to facilitate the creation of events around a film, such as debates, discussions with actors, authors, cross-disciplinary stakeholders, associations, etc.

Figma, Ruby on Rails, JavaScript, HTML/CSS, PostgreSQL, SQL, Git, GitHub.

Teacher assistant | Le Wagon

Le Wagon Marseille (Nov 2019)

www.lewagon.com/fr

Assist the teacher during the morning class. Provide help, support, and correction for students with their morning and afternoon exercises, and clarify the lesson as needed. Skills covered: HTML5, CSS3, Bootstrap, CSS Grid, Component Design, UI/UX.

HTML5, CSS3, Bootstrap, CSS Grid, design de composants, UI/UX.

Mentoring Rails | Rails Girls

Rails Girls (Nov 2019)

railsgirls.com

Mentoring at the Rails Girls event in Saint-Étienne. Coached participants on setting up their development environment and creating a small Rails application using scaffold..

Ruby on Rails, HTML/CSS, PostgreSQL, Git.

Vue.js Developer | Marseille Hackathon

Rails Girls (Nov 2019)

<https://github.com/Kwette/marcelle-mobi-hackathon>

Development in Vue.js of a feature (not deployed) on an existing web application over two days: marcelle.mobi.

Feature: On the map, added a filter for nearby "film locations."

As a user, I can:

- Display nearby "film locations",
- Click on a customized marker to display a link to the film,
- Click on the link to view information about the film,
- Click on the "see on the map" button, which directly opens the Google Maps page for the filming location.

Teamwork with 5 developers from different schools, levels, and tech stacks:

- 2 students in Java (Wild code school)
- 2 prospective students (Le Wagon Marseille)
- Myself, a Le Wagon Marseille alumni (Ruby / Rails / JS).

Illustrator, Vue.js, HTML/CSS, Heroku, Git, GitHub.

<https://github.com/Kwette/marcelle-mobi-hackathon>

[https://www.behance.net/gallery/89008571/Web-Application-\(developed-in-Vuejs\)-marcellemobi](https://www.behance.net/gallery/89008571/Web-Application-(developed-in-Vuejs)-marcellemobi)

End of study project (Le Wagon) | Tripper

Ruby On Rails Application
github.com/Kwette/trip-planner-refonte-rails-app

Rails Application – Trip Planner: Plan a trip with activities selected based on preferences and optionally hidden according to the "percentage of mystery" chosen by the user.

- As a user I can:
- Sign up or log in,
 - Create a new trip,
 - Set my preferences for activity types,
 - Select activities from a categorized list,
 - Personalize my trips with "party time" options,
 - Choose the level of mystery,
 - View my trip, stay by stay,
 - View the list of activities for each stay,
 - Update my trips,
 - View my list of trips.

This project was initially developed by a team of 5, with a graphic overhaul completed by me.

Ruby on Rails, HTML/CSS, PostgreSQL, Git.

 <https://github.com/Kwette/trip-planner-refonte-rails-app>

 [https://www.behance.net/gallery/89014253/Tripper-Travel-planner-\(developed-in-Ruby-on-Rails\)](https://www.behance.net/gallery/89014253/Tripper-Travel-planner-(developed-in-Ruby-on-Rails))

End of study project (Le Wagon) | Whats_Act

Ruby On Rails Application
github.com/Kwette/What-s-Act

Rails Application for Booking Sporting, Cultural, and Other Activities.

- As a user, I can:
- Sign up or log in,
 - Go to the homepage,
 - View the list of activities or search for activities by type or location,
 - Access an activity’s page with all its details,
 - Book activities directly from the activity's page,
 - View my list of bookings (filtered by activity type if desired) and track their status,
 - Contact the activity owner through in-app messaging.

- As a seller, I can:
- Access all the features available to users,
 - Create a new activity (access the seller session by clicking on the menu avatar),
 - View my list of activities or search by type or location,
 - Delete my activities,
 - View the list of bookings for my activities (filtered by type if desired) and track their status,
 - Change the status of my bookings with "accept" and "decline" options,
 - Contact buyers through in-app messaging.

This basic project was initially developed by a team of 5, and then I took over for a complete redesign of the site and added new functionalities.

Figma, Ruby on Rails, JavaScript, HTML/CSS, PostgreSQL, SQL, Heroku, Git, GitHub.
